

Course 1:- Prompt Engineering For chatgpt
= Fascinating topic { : }

=> Lecture 1:- In first lecture, I learned that how we can use chatgpt or any other LLM for rapidly ^{iterating} and ^{changing} prototyping ^{writing something in different forms} with different things. We can refine ~~our~~ our question to get more accurate and better results. chatgpt is not just for writing essays it is for getting ^{answers for} different type of ideas and questions.

=> Lecture 2:- In Lecture 2 we learned that, how we can use chatgpt for writing prompts, (overview of this course), also I learned that that if we're more creative we get more better output. So focuss on creativity get more ideas, think more ideas, ~~learn about~~ implement those ideas.

=> Lecture 3:- In Lecture 3, I learned that, If we give prompts to gpt by specifying its job like telling chatgpt or any other LLM that Your job is this... (Act as a speech pathologist) it will give you more accurate answers.

=> Lecture 4:- Setting up account and using gpt.

Module 2 $\Rightarrow$ Prompt meaning $\Rightarrow$ call to ^{action}

The word "prompt" can have several meanings depending upon the context in which it is used. Here are possible definitions:-

(verb) To cause or encourage someone to do something; to spur them into action.

ex:- The teacher's reminder about the upcoming exam prompted the student to start studying.

(adjective) Done without delay; on time; punctual

Example:- The prompt arrival of the ambulance saved the injured person's life.

(noun) A cue or reminder that helps someone remember what they are supposed to do or say.

ex:- The actor forgot his lines, but the prompt from the stage manager helped him get back on track.

(noun) A message on a screen that appears on a computer or other electronic device, asking the user for input.

ex:- When I opened the program, a prompt appeared, asking me to enter my username and password.

Example of prompts:- When I ask a question, suggest me a better version for the question and ask me to use this question for better results.

⇒ Module 2 ⇒ Intuition behind prompt
Intuition means an understanding or feeling about something without ~~going~~ needing a detailed explanation or formal reasoning.

Intuition behind prompt :- "What is the main idea, purpose, or thinking behind prompt?"

Ans:- You should have follow a specific pattern as you know data in any LLM is trained and we get the output word by word so we need to focus on the pattern if we follow the ^{generic} pattern we will get the generic results and if we follow the professional pattern of prompt we will get professional result.

⇒ Module 2 ⇒ Everyone can program with ~~modules~~ prompts.

⇒ What I learned in this lecture:-
Whenever we prompt or give instructions to any LLM we must need to give and specify the rules for the output format that we need output in this format etc.

=> Module 2 => Prompt pattern or
A pattern for structuring the words
and the statements in your prompt.

=> A prompt pattern is a way that
we document a certain structure
of phrases and statements in order
to solve a particular problem in
with a large language models

=> Module 2 => Persona pattern

The persona pattern is one of
the most powerful pattern

Persona means a role, character
or identity that someone adopts

In AI and prompt engineering
a persona tells the AI who
it should act like when
answering.

ex8- Act as a Math Professor

the following fundamental contextual statements

- Explain X to me.
- Assume that I'm persona Y.

Example:-

Explain large language to me
Assume that I'm a bird.

=> Module 3 => Flipped Interaction pattern

It is like giving command to chatgpt to ask question from you until you achieve the goal

• You should ask me questions until condition Y is met or to achieve this goal.

=> Module 6 =>

Ask for Input patterns

Whenever I ask you to write a prompt for me to accomplish a task, list what the task is, list alternative approaches for completing the task, and then write a prompt for yourself for each approach. When you're done ask me for the next approach prompt to create alternatives for

Ask me what I want you to write a prompt for

⇒ Module 6 ⇒ Outline expansion pattern

Act as an outline expander. Generate a bullet point outline based on input that I give you and then ask me for which bullet point you should expand on. Create a new outline for the bullet point that I select. At the end, ask me for what bullet point to expand next.

⇒ Module 6 ⇒ Menu Pattern

Whenever I type: "write <Bullet Point> <Paragraph>" you will write content for the selected bullet point <Bullet Point>. You will write <Paragraphs> of the text. Whenever I type just "<Bullet Point>" you will expand that bullet point. At the end, you will ask me for the next action.

⇒ Module 6 ⇒ Fact checks

Whenever you output text, generate a set of facts that are contained in the output. The set of facts should be inserted at the end of the output. The set of facts should be fundamental facts that could undermine the veracity of the output if any of them are incorrect.

⇒ Module 6 ⇒ Filter Pattern.

Filter this information to remove X.

Filter this email to remove redundant information.
